Lecture 1 : Inverse Functions One-to-one Functions A ...

Inverse Functions Inverse Functions If f is a one-to-one function with domain A and range B , we can define an inverse
function f^{-1} (with domain B) by the rule $f^{-1}(y) = x$ if and only if $f(x) = y$: This is a sound definition of a function,
precisely because each value of y in the domain of f^{-1} has exactly one x in A associated to it by the rule $y = f(x)$. Feb

is called the domain of R and the set $\text{Range}(R) = \{b \in B \mid \exists a \in A, (a, b) \in R\}$ is called the range of R . Note that $\text{dom}(R) \subseteq A$ and
 $\text{Range}(R) \subseteq B$. When $A = B$, we often say that R is a (binary) relation over A . The term correspondence between A and B is also
