Half-Life
• The “half-life” (h) is the time it takes for half the atoms of a radioactive substance to decay. • For example, suppose we had 20,000 atoms of a radioactive substance. If the half-life is 1 hour, how many atoms of that substance would be left Jan 1th, 2024

Chapter 19 Radioactivity And Nuclear Energy 1. The nucleus of an atom has little or no effect on the

atom's chemical properties. The chemical properties

of an atom are determined by the number and arrangement of the atom's electrons (which are outside the nucleus).

CHAPTER 19: RADIOACTIVITY AND NUCLEAR ENERGY INTRODUCTION

Most chemical properties depend on the arrangement of electrons, and many chemical reactions involve the transfer of electrons

from one atom to another. But the events and

reactions described in this chapter depend on the

properties of the nucleus of an atom. The best known
